ENERGY POLICY

At Kutes, we act with the awareness of our duties and responsibilities in order to leave a better world for future generations and to protect our natural resources. We carry out studies to develop renewable energy applications and to use our energy resources efficiently in all our activities, especially in our production activities.

In this framework;

- We act in accordance with all legal regulations published on energy management.
- We regularly identify actions to reduce environmental impacts, including energy efficiency and renewable energy projects.
- In order to increase energy efficiency in all of our activities for a sustainable world, we use monitoring practices to track energy consumption, set targets to reduce the amount of energy consumed and continuously review these targets.
- We conduct our design and procurement processes with a focus on energy efficiency and prefer products with high energy efficiency in machinery and equipment procurement.
- We develop energy efficiency projects to reduce the amount of energy we consume and with these projects, we reduce the amount of electricity we use per product and contribute to the reduction of greenhouse gas emissions.
- In order to ensure that our employees use energy efficiently in our operations, we provide training opportunities to raise their awareness on energy efficiency practices.
- Beyond reducing our energy consumption, we invest in this area in order to seize opportunities for the use of renewable energy resources in primary and secondary energy supply.

As Kutes, we are committed to improving our energy performance every year by undertaking continuous improvement activities in order to enhance our current performance and capacity.

This policy is reviewed periodically and updated when deemed necessary. The Sustainability Committee is responsible for updating the policy. The Policy entered into upon the approval of the Top Management.
